

Hollow

POLTRONE

2006

Patricia Urquiola

Description

This project is the result of a group of modular panels of different sizes, which can be assembled through hinges to act as back and armrest and hold a soft seats. Blocked and supported by the legs, the entirely upholstered and lined panels display a concave plastic surface on the outside, which visually moves the elements and enhances their effect of lightness.

Technical information

Internal frame

tubular steel and steel profiles
