

# Diesis

SOFAS

1979

Antonio Citterio Paolo Nava

## Description

Technology, elegance, ergonomics and comfort. An absolute icon of the modern furniture tradition, combining innovative technology and sophisticated craftsmanship, the Diesis sofa has become an essential element in the history of design. The precisely defined metal load-bearing structure combines with the seat, back and armrests in the shape of soft padded cushions covered in fabric or leather. Other details, such as the comb-shaped back in harmonic steel covered in leather, the die-cast aluminium parts and the leather, which is micro-perforated for aeration, have all become characteristic decorative elements denoting the careful attention dedicated to this product and its strong personality. Its utmost elegance even when seen from the back, with its leather upholstered backrest, means it can be placed at the centre of the room. Distinctive features and technological materials make Diesis a long-lasting product that meets the most sophisticated international taste. Comfort is guaranteed by soft padding.

# Technical information

---

**Frame**

steel sheet and steel profiles, shaped polyurethane covered in leather

**Seat cushion upholstery**

shaped polyurethane of different density, memory foam visco-elastic polyurethane, sterilized down, polyester fibre cover

**Back cushion upholstery**

shaped polyurethane, sterilized down

**Armrest cushion upholstery**

sterilized down

**Support frame and feet**

die-cast aluminium and tubular steel

**Ferrules**

plastic material

**Cover**

fabric (profiles in Bellano fabric for velvet version) or leather
