

Flat.C Frame

LIVING STORAGE UNITS

2025

Antonio Citterio

Description

In the world of design, the value of a project lies in its ability to adapt to new ways of living without losing its identity. Launched in 2008, Flat.C redefined the concept of storage, responding to the needs of increasingly fluid and dynamic spaces. Today, with Flat.C Frame, the living area system evolves into a self-supporting architectural solution, enhancing its versatility and introducing new configuration possibilities. The defining feature of Flat.C Frame is its load-bearing structure in extruded aluminium, which allows it to go beyond traditional wall mounting and extend from floor to ceiling. This approach makes it ideal not only as a bookshelf-storage unit but also as a central room divider, perfect for living areas, kitchens, and contract spaces. The wall-mounted system features exposed rear supports with a vertical range from 2197 mm to 3061 mm, with the option to customise the height up to 4175 mm. The rear uprights can be concealed behind an elegant boiserie, a new feature that adds even more sophistication to the system. Another option includes ceiling-mounted installation, either against the wall or as a freestanding central room divider, giving Flat.C Frame a contemporary and highly functional character. Designed to maximise storage capacity even in compact spaces, Flat.C Frame responds to the architectural demands of apartment buildings, a key theme in the work of ACPV ARCHITECTS. The boiserie system consists of horizontal profiles for wall mounting and cladding panels available in various sizes and finishes, with the possibility of custom floor-to-ceiling solutions for a striking architectural impact. Flat.C Frame offers an extensive range of storage solutions. Thanks to a wide selection of units, including hinged door cabinets, single and double drawers, flap-door cabinets and hinged-door cabinets, this new line provides endless storage possibilities to suit any contemporary lifestyle. The horizontal shelves are adjustable thanks to an upright system with vertical guides and anchor points, making the bookcase even more dynamic and versatile. The system also integrates a sophisticated new LED lighting system designed to enhance each composition. New materials and finishes further expand the aesthetic range, introducing light oak and etimóé, a refined wood essence similar to mahogany with warmer tones, along with chrome-finished aluminium profiles. A tailor-made system for contemporary living, redefining the concept of space.
